IMPORTANT NOTICE Aston Martin Lagonda Limited is constantly seeking ways to improve the specification, design and production of its vehicles and alterations take place continually. Whilst every effort is made to produce up-to-date literature, this brochure should not be regarded as an infallible guide to current specifications, nor does it constitute an offer for sale of any particular vehicle. The contents of this brochure represent the Company's business as a whole. Text and photographs may relate to models not available for sale in some countries. Performance results may vary depending on the specification of the particular vehicle, road and environmental conditions and driving style. Published figures should be used for comparison purposes only and verification should not be attempted on public roads. Aston Martin Lagonda Limited strongly urges that all speed laws be obeyed and that safety belts be worn at all times. Distributors and dealers are not agents of Aston Martin Lagonda Limited and have absolutely no authority to bind Aston Martin Lagonda Limited by any express or implied undertaking or representation.

ASTON MARTIN

AMVOX3 TOURBILLON GMT

The third timepiece to be created for the exclusive Jaeger-LeCoultre Aston Martin collection, the AMVOX3 Tourbillon GMT embodies the power and style of an Aston Martin and the technical innovation, reliability and performance of Jaeger-LeCoultre watches.

High Watchmaking Meets Advanced Technology

Fulfilling the criteria expected of an Haute Horlogerie model, this superlative sports watch brings three exceptional features to the partnership for the first time: the accuracy of an automatic tourbillon movement, the advanced technology of a platinum-iridium/carbon-fibre oscillating weight and the durability of a stylish black ceramic case.

Calibre 988, In-House Tourbillon

Reflecting the perfect balance of cutting-edge technology and high performance inherent in every Aston Martin, the AMVOX3 Tourbillon GMT houses Jaeger-LeCoultre's patented automatic Calibre 988 tourbillon movement. The tourbillon drives two time-zone displays as well as AM/PM and date indication. The main hour hand is adjustable in one-hour increments, backwards or forwards, by rotating the crown. Uniquely, the patented date indicator makes a larger jump between the 31st and the first day of each month to ensure that the tourbillon mechanism, set within the openwork dial, is in full view at all times.

Patented High-Tech Oscillating Weight

This 21st-century movement is further distinguished by a new oscillating weight featuring a redesigned, three-spoke geometric shape, which offers a considerable improvement in winding performance. As with an Aston Martin, the use of avant-garde materials not only effects a considerable weight saving allied to enhanced durability, but also serves to slim down the construction.

Power and Refinement

Every Aston Martin offers a unique blend of state-of-the-art technology and classic design references. The seductive appeal thus created is mirrored by the Jaeger-LeCoultre AMVOX3 Tourbillon GMT, which combines the classic beauty of 18-carat gold with the contemporary technology of a ceramic case that is scarcely heavier than titanium yet twice as hard as steel. The black hue of the case, numerals and grid-patterned dial echoes the characteristic structure of a car radiator grille, making a striking contrast with the 18-carat pink gold

of the polished crown and the gilded accents of the luminescent baton hands. Even the crown of the AMVOX3 Tourbillon GMT resembles the filler cap on an Aston Martin.

With the Aston Martin logo discreetly registered at 6 o'clock on the dial and at 12 o'clock on the pink gold surround of the case-back, the AMVOX3 Tourbillon GMT is completed with one further signature code of prestige motoring: a superbly comfortable, Alcantara-lined driver's strap in perforated black calfskin with white overstitching.

In keeping with the exclusivity of Aston Martin, the Jaeger-LeCoultre AMVOX3 Tourbillon GMT is available in a limited, numbered series of only 300 pieces, remaining a luxury reserved for a privileged few.

Technical Specifications

- The movement is Manufacture Jaeger-LeCoultre Calibre 988, crafted and decorated by hand. It is 7.49 mm thick, and has 323 components, 35 jewels, an 11.5 mg x cm² variable-inertia balance oscillating at 28,000 vph and a 48-hour power reserve.
- The tourbillon mechanism is constructed with a 4N gold-plated upper bridge and a grade 5 titanium carriage, featuring bevelled, hand-drawn and polished edges, which weighs just 280 mg.
- Twenty-eight per cent lighter than classic rotors, the patented oscillating weight of the Jaeger-LeCoultre Calibre 988 movement is made from an alloy of platinum and iridium, with carbon-fibre arms. The weight is mounted on low-friction, ceramic ball bearings.
- The 44 mm diameter black ceramic case is fabricated from a blend of 95 per cent zirconium and five per cent yttrium oxides heated at 2000-bar pressure to a temperature of over 2000 degrees, and is twice as hard as steel.
- Accurate to -1/+4 seconds per day, the AMVOX3 Tourbillon GMT is tested for 1000 hours and water-resistant to 50 metres.

Enquiries
