

**DB4, DB5, DB6 Wood rim Steering wheel newly available**

We are pleased to announce that we have re-sourced the 16" Wood Rim wheel for the DB4, DB5 and DB6 models. These have been handcrafted by the man who made the original DBR1 wheels for us in the 1950's, as well as those for the DB4 and DB5. They include the all important original style fillet around the outer circumference. We will endeavour to keep stock on the shelf at all times.

We have taken the decision to produce these in two versions:

Part No 020-025-0007. Totally original finish, wood stained to a Matt finish. After much research and consultation with those who were involved with these wheels on the Purchasing side as well as production, this is the definitive original finish and ideal for those owners who appreciate the importance of originality.

Part No 020-025-0008. As above but finished in a high gloss lacquer, which research has indicated appears to be the preference of many owners these days.

Please note that these wheels are totally hand-made, and no two are absolutely identical. Imperfections that are identified are likely to be due to the handcrafted nature of the wheel and not a manufacturing fault.

Also available to special order is a 15" version of the same wheel. We will not be stocking these initially, and there will be an 8 week lead time.

Part No: 25-27885 15" Original Matt Finish

Part No: 25-27886 15" Gloss Finish
