

At Aston Martin we have always prided ourselves on the level of support we offer on our older models.

We have recently invested in new tooling for the door check arms used on all cars from the 1968 DBS to the 1989 AMV8.

Used on all variations of the cars this part is an integral part of the door opening mechanism and is essential to prevent damage to the door and wing edge. For added security we also recommend the fitting of the safety plate 65-19752.

The part numbers are:

65-19304 LH Door check arm assembly

65-19305 RH Door check arm assembly

To order these or any other Heritage parts please contact one of our Heritage Specialists or Main Dealers, details of which can be found by following the link on this News page.
